Batent No. 6103465

GENERAL INFORMATION:
APPLICANT: Lealle Johnston-Dow, Robert B. Chadwick, Peter Parham
ATTLE OF INVENTION: Method and reagents for typing HLA class I genes
NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESSE: Paul D. Grossman, Perkin-Elmer Corp., Applied Biosystems Division
STREET: 850 Lincoln Centre Drive
CITY: Foster City
STATE: California
COUNTRY: USA
                                                                                                            RESULT 15
US-09-300-368A-73/C

Sequence 73, Application US/09300958A

Patent No. 6495319

General INFORMATION:
APPLICANT: Welsh, John
APPLICANT: Welsh, John
APPLICANT: Trenkle, Thomas

TITLE OF INVENTION: Reduced Complexity Nucleic Acid Targets and Methods of
TITLE OF INVENTION: Using Same
TITLE OF INVENTION: Using Same
FILE REFERENCE: P-PH 3457

CURRENT FILING DATE: 1999-04-27

PRIOR FILING DATE: 1998-04-27

PRIOR FILING DATE: 1998-04-27

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 544, Application US/09827998

Sequence 544, Application US/09827998

Patent No. 6656700

GENERAL INFORMATION:

APPLICANT: GL. Yizhong

APPLICANT: GL. Yizhong

APPLICANT: Shamon, Mark

TITLE OF INVENTION: NOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E

FILE REFERENCE: MDHMORP.8

CURRENT APPLICATION NUMBER: US/09/827,998

CURRENT APPLICATION NUMBER: US 60/207,456

PRIOR APPLICATION NUMBER: US 60/207,456

PRIOR APPLICATION NUMBER: US 60/236,359

PRIOR PILING DATE: 2000-09-27

NUMBER OF SEQ ID NOS: 1881

SOFTWARE: Aeomica Sequence Listing Engine

SEQ ID NO 545

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Sequence 3, Patent No. 618399
GENERAL INFORMATION:
APPLICANT: GROENER, Albrecht
TITLE OF INVENTION: Procedure for the detection of high virus
TITLE OF INVENTION: means of the polymerase chain reaction
FILE REPERENCE: 06478.1419-00000
SCURRENT APPLICATION UNBER: 1998-11-24
CURRENT FILING DATE: 1998-11-24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 0.9%; Score 15.4; DB 1; Length 21; Best Local Similarity 94.1%; Pred. Sequence 89, Application US/08838715B
Patent No. 6153595
GENERAL INFORMATION:
APPLICANT: Draper, Chapman, Kisner, Anderson
TITLE OF INVENTION: Ocmposition and Method for Treatment
TITLE OF INVENTION: Of CMV Infection
NUMBER OF SEQUENCES: 90
CORRESPONDENCE ADDRESS:
ADDRESSE: Jane Massey Licata, Esq.
STREET: 66 E. Main Street
CITY: Mailton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER READBLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 172, Application US/09676610B

Patent No. 644465
GENERAL INFORMATION:
APPLICANT: C. Frank Bennett
APPLICANT: Jacqueline Wyatt
APPLICANT: Jusan M. Freier
TITLE OF INVENTION: OLIGONUCLEOTIDE INHIBITION OF HER-1 EXPRESSION
FILE REFERENCE: RTS-013
CURRENT APPLICATION NUMBER: US/09/676,610B
CURRENT FILING DATE: 2000-09-29
NUMBER OF SEQ ID NOS: 182
                                                                                                                                                                                                                                                                                                                                                                                                              APPLICANT: Donna T. Ward

Sequence 3, Application US/09414145
Patent No. 6160152
GENERAL INFORMATION:
APPLICANT: Capaldi, Daniel C
APPLICANT: Ravikumar, Vasulinga T
TITLE OF INVENTION: Improved Process For The Synthesis Of Oligomeric
TITLE OF INVENTION: Compounds
FILE REFERENCE: ISSA4179
CURRENT APPLICATION NUMBER: US/09/414,145
                                                              TITLE OF INVENTION:

TITLE OF INVENTION: Composition and Method for Treatment
TITLE OF INVENTION: Composition and Method for Treatment
TITLE OF INVENTION: OC GWV Infection
NUMBER OF SEQUENCES: 90
CORRESPONDENCE ADDRESS:
ADDRESSEE: Jane Massey Licata, Esq.

18-509-389-283-19/c

Sequence 19, Application US/09389283

Patent No. 6531584

GENERAL INFORMATION:

APPLICANT: Phillip Dan Cook

TTLE OF INVENTION: 2-Modified Oligonucleotides

TTLE OF INVENTION: 2-Modified Oligonucleotides

NUMBER OF ENCURY. 3. 4

TTLE OF INVENTION: 2-Modified Oligonucleotides

NUMBER OF SEQUENCES: 37

CORRESPONDENCE ADDRESS:

ADDRESSE: Woodcock Washburn Kurtz Mackiewicz & No. 6531584ris

STATE: Philadelphia

CONFEST: One Liberty Place - 46th Floor

CITY: Philadelphia

STATE: PA

COMPUTER READABLE FORM:

MEDIUM TYPE: 3.5 Inch disk, 720 Kb

COMPUTER: IBM PC Compatible

COMPATIBLE NOT ON DATE:

APPLICATION NUMBER: US/09/389,283
TITLE OF INVENTION: 2'-Modified Oligonuclectides
NUMBER OF SEQUENCES: 37
CORRESPONDERS: 37
CORRESPONDERS: Moodcock Washburn Kurtz Mackiewicz & No. 6531584ris

US-10-318-628-12/c

US-10-318-628-12/c

Sequence 12, Application US/10318628

Patent No. 6643733

GENERAL INFORMATION:

APPLICANT: Manoharan, Muthiah

APPLICANT: Ravikumar, Vasulinga T.

APPLICANT: Ravikumar, Vasulinga T.

TITLE OF INVENTION: Activators For Oligonucleotide Synthesis

FILE REFERENCE: ISIS4855

CURRENT FAPLICATION NUMBER: US/10/318,628

CURRENT FILING DATE: 1998-10-23

PRIOR APPLICATION NUMBER: 69/177,953

PRIOR PILING DATE: 1998-06-02

NUMBER OF SEQ ID NOS: 47

SOFTWARE: PatentIn version 3.2

SEQ ID NO 12

LENGTH: 21

Patent No. 667471.

GENERAL INFORMATION:

APPLICANT: Cheruvallath, Zacharia S.

APPLICANT: Ravikumar, Vasulinga T.

APPLICANT: Cale, Douglas L.

TILLE OF INVENTION: Process For The Synthesis Of Oligomeric Compounds
FILE REFERENCE: ISIS-5108

FULRENT FILLING DATE: 2002-11-08

PRIOR PILLING DATE: 2001-12-11

PRIOR PELICATION NUMBER: 09/349,659

PRIOR FILLING DATE: 1999-07-08

NUMBER OF SEQ ID NOS: 4
